

Dr. Ulevičius Alius

1986–88 PhD student at the Institute of Zoology and Parasitology of the Lithuanian Academy of Sciences, 1988–90 junior research fellow at the Institute, 1990–92 junior research fellow at the Institute of Ecology, since 1994 research fellow, 2003–07 senior research fellow. Since 2003 lecturer at the Centre for Environmental Studies, Vilnius University, since 2005 at the Faculty of Natural Sciences. Since 2003 he has been a lecturer, since 2007 an associate professor, professor.

In 1993 defended his PhD thesis "Population formation and spatial-genetic structure of beaver (*Castor fiber* L.) in Lithuania" at the Institute of Ecology. He analyzed the phenotypic relatedness of the beaver intra-population groupings and compared the results with historical data on the origin of the studied groupings. Investigated the current density of beaver and otter populations, the ecological relationships of beaver and other semi-aquatic mammal communities in valley ecosystems, the dynamics of beavers and their population, and the beaver impact on the environment. Later, research was focused on the functional relationships of ecosystem keystone species in natural and anthropogenic habitat types; invasive and alien species and their impact on ecosystems.
